Web App Updates **v5.0.0** - Major Feature Release

Multi-Location Support (Select Tiers)

You can now manage products, storage areas, and barcodes across multiple locations—all in one place. This makes it easier to customize inventory counts for each site and speeds up setup by letting you copy settings from one location to another.

Why it matters:

Whether you have 2 locations or 20, inventory just got easier to manage and scale.

Serialized Inventory (Coming Soon!)

We've added the early groundwork for tracking individual items by serial number. While it's not fully active yet, you'll start to see hints of it in your Search, Count, Pick, and Receive features.

Why it matters:

This sets the stage for detailed item tracking, like managing warranties or tracing specific units in the future.

Bug Patches and Improvements

OMC **5.0.2**

Released: April 15, 2025

- Fixed a search bug that sometimes gave incomplete results when looking up SKUs or barcodes.

OMC 5.0.5

Released April 15, 2025

- Fixed an issue where images weren't uploading correctly for profiles, companies, or reports.
- Improved barcode generation so it works better across different locations.

OMC 5.0.8

April 16, 2025

- Reorder reports now display better on screen.
- You can now search SKUs and barcodes that include hyphens—more flexibility and accuracy!

Mobile App v7.0.78 - April 15, 2025

Multi-Location Support (Select Tiers)

You can now manage your inventory across multiple locations right from the app.

- Track products, storage areas, and barcodes specific to each site.
- Customize counts per location for better accuracy.
- Set up new locations faster by copying settings from existing ones.

Why it matters:

Managing inventory on the go is now more flexible and accurate, perfect for teams working across different stores, kitchens, or warehouses.

Getting Ready for Serial Number Tracking

We've added the behind-the-scenes setup for tracking items by serial number.

Early support is now live in the Search, Count, Pick, and Receive screens.

Why it matters:

Soon, you'll be able to track individual items, such as equipment or high-value goods, directly in the app. This opens the door to smarter tracking and accountability.
