Online Management Console (OMC) v4.0.78

### Products Page Updated

The Products Page now seamlessly supports multiple product selections for various actions, such as barcode printing. Users can now select multiple products for barcode printing without selecting an Area or Category, enhancing productivity in barcode sheet generation.

### Improved Session Management

The side menu dynamically updates upon login with different accounts, ensuring a smooth transition between user profiles.

### Enhanced Product Management

Special characters are now permitted in product names and descriptions, ensuring accurate representation of product information across the application.

### Standardized Value Report Precision

Decimal precision in Finalized counts within the Value Report has been standardized to two decimal places, improving data consistency.

### Unleashed Integration Update

The OMC has been updated to custom export required data as a CSV for a seamless integration with the Unleashed system. This facilitates efficient stock count updates.

### Product Catalog Improvements

The Product Catalog search functionality now includes two custom fields, enhancing search capabilities and data accessibility.

## Pagination for Product Filtering

Pagination has been implemented for improved navigation and user experience when filtering products by category.

## Session Timeout Enhancement

A session timeout feature has been added to enhance security. Users are prompted with a session expiration screen after 30 minutes of inactivity. Automatic logout occurs if no action is taken within 30 minutes, ensuring data security.

## Profile and Password Management

A new password update process has been integrated into the user profile, requiring users to confirm their old password when setting up a new one. This feature adds an extra layer of security to user accounts.
