FOR FACILITIES, FLEETS, AND MRO STOREROOMS

Know which part is on the shelf before the call comes in.

Trakr is inventory management software for facilities and maintenance teams. Keep track of spare parts across storerooms, vans and drawers, and see what to reorder.

Per location
minimum levels

A TYPICAL SITUATION

Maintenance stock lives in a storeroom, a few drawers and the back of two vans. A technician finds the filter is gone only when they open the drawer on site.

WITH TRAKR

In Trakr the storeroom and each van are locations or storage areas. Parts are picked in the app, vans are restocked with transfers, and a minimum on each critical spare shows when it is running low.

MANAGE

Parts picked in the app

Pick parts from the storeroom on a phone. Each pick lowers on-hand and appears in the product's movement history.

ORGANIZE

Vans as locations

A vehicle can be a location or a storage area. Set it up as a location to give it its own minimum levels, and restock it from the storeroom with a transfer.

REPLENISH

Minimums on critical spares

Set a minimum for each part. The reorder report and the Health Check show what is low, and an optional email digest tells administrators.

CONNECT

Scan the drawer label

Print shelf and bin labels, then scan them with the phone camera to jump to the right place. No hunting.

VISIBILITY

A record of every movement

Look up the movement history of any part, and export reports as Excel or PDF.

WHAT TRAKR DOES HERE

- ✓ **Pick parts where the work happens**
  Pick from the storeroom or the van on the technician's phone.
- ✓ **Storeroom and vans in sync**
  Transfers record a pick at the source and a receive at the destination.
- ✓ **Minimums on the parts that matter**
  Set a minimum per part and location, and see what to reorder.

THE FIVE PILLARS, IN FACILITIES & MAINTENANCE TERMS

Manage	Count, pick and receive parts on a phone. Assign pick and receive tasks to a technician or let someone claim them.
Visibility	See stock per location and storage area, the movement history of each part, and a Health Check dashboard for the location you are in.
Organize	Set up the storeroom, vans and buildings as locations and storage areas, and move parts between them with transfers.
Connect	Scan parts and shelf labels with the phone camera, and print labels for bins and drawers.
Replenish	Set minimums on critical spares and see what to reorder, with email alerts if you want them.
Hardware	Trakr works on any phone out of the box and plugs into Linea Pro scanners, RFID, and label printers when you need them.
