FOR FACTORIES, MRO STORES, AND SPARE PARTS

Every part accounted for across every storeroom.

Trakr is inventory management software for factories and manufacturers. Track spare parts and consumables across storerooms and sites, down to the bin, and see what is running low from a phone.

Per bin
on-hand by storage area

Per site
minimum levels

Transfers
between locations

A TYPICAL SITUATION

A factory has three storerooms and a tool crib, each with its own spreadsheet. Nobody is sure which site holds the spare bearing, so parts get reordered that are already on another shelf.

WITH TRAKR

In Trakr each storeroom is a location with storage areas nested down to the bin. On-hand is visible per area, stock moves between sites as transfers, and each part has its own minimum at each location.

Step 1 — RECEIVING
Dock
Record the delivery with its PO and invoice numbers. On-hand goes up when you save.

Step 2 — STORAGE AREAS
Bin
Storage areas nest to any depth, such as room, shelf and bin, so on-hand is visible per area.

Step 3 — PICK TASKS
Line
Create pick tasks and assign them to a person or let someone claim them. Completing a task records the picks.

Step 4 — REORDER REPORT
Report
The reorder report lists parts below their minimum with a suggested quantity. Export it as Excel or PDF.

WHAT TRAKR DOES HERE

- ✓ **Several storerooms, one inventory**
  Add a location for each site or storeroom and transfer parts between them.
- ✓ **Minimums per part and location**
  Give each part its own minimum at each storeroom, and see what is below it on the reorder report.
- ✓ **Down to the bin**
  Nest storage areas as room, shelf and bin, or import them from Excel.
- ✓ **Roles and tasks**
  Assign people to locations, give each role the access it needs, and hand out count, pick and receive tasks.

THE FIVE PILLARS, IN MANUFACTURING TERMS

Manage	Count, receive, pick and transfer parts from a phone, with pick and receive tasks for the work that needs assigning.
Visibility	See quantities per location and storage area, the movement history of each part, and the Health Check dashboard for the site you are in.
Organize	Model factories, storerooms, racks and bins as locations and nested storage areas. Assign users to locations and set roles.
Connect	Scan with the phone camera or Linea Pro scanners, count fast with RFID, and reach Trakr from your own systems through the REST API.
Replenish	Set a minimum per part and location, see what to reorder, and record the PO number on the receipt.
Hardware	Trakr works on any phone out of the box and plugs into Linea Pro scanners, RFID, and label printers when you need them.

Ready to account for every part?
